

Thermal Shock Chamber TSE-11-A

ESPEC offers a compact, but highly performant thermal shock chamber ideal for the requirements of test standards with small and low-volume specimen.

Equipped with superior temperature recovery performance capable of answering the requirements of severe test specifications, this thermal shock model offers a wide test area in a compact, slim design.

Characteristics

A high performance compact package to meet severe test requirements.

A temperature recovery time of less than 5 minutes is achieved in 2 zones (+150°C and -65°C) without auxiliary cooling

By realizing a temperature recovery time of less than 5 minutes for the upstream air in the 2 zones (+150°C and -65°C), we have achieved performance equivalent to that of a large thermal shock chamber without having to use auxiliary cooling by means of liquid carbon dioxide, which was required in previous compact thermal shock chamber.

Complies with MIL-STD-883H and other test standards

This compact thermal shock chamber satisfies the temperature cycle test requirements of MIL-STD-883H and other test standard (see page 5).

Smooth specimen transfer

The "soft-move mode" is used to reduce vibration shock when specimens are moving between the hot and cold chambers.

Uniform temperature distribution across specimens

High temperature uniformity performance ensures consistent stress on specimens.

High-temperature exposure

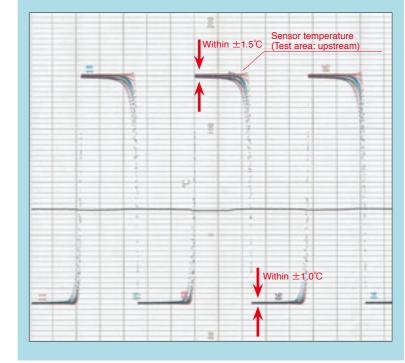

Low-temperature exposure

Examples of temperature uniformity

•Test conditions

• Temperature uniformity measurement method Thermocouples were embedded in 10 plastic

molded ICs (16 pin DIPs), which were then placed on two levels in each of the corners and in the center of a specimen basket.

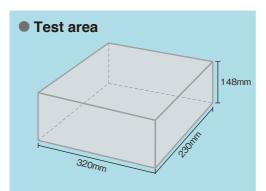

Characteristics

Control panel

Controller

Setting	Interactive key input by touch panel				
Display	TFT Color LCD				
Test patterns	RAM (selected entry): a maximum of 40 patterns can be entered ROM (built-in): contains 10 test standard patterns				
Auxiliary functions	· Timer preset· Program memory· Test continuity selection· Automatic power shut-off· Overheat/ Overcool protection· Programmed time display· Upstream/ downstream sensor selection· Test suspension· Stable time control· Test completion mode selection· Quick exposure control· Trend graph· Power recovery mode· Alarm history display· Automatic defrost· Sensor calibration· Temperature recovery time setting· RS-485 communication				

Cable port (50mm, shown with cap installed)

Color LCD interactive touch-screen system

Operation and settings simplified by the use of a touch-screen LCD display (instructions displayed on-screen). At-aglance confirmation of test patterns, test area temperatures, temperature cycles, upstream / downstream control, and trend graphs display.

Large 10.9-liter-capacity test area

Features a 10.9-liter test area, twice that of our previous model. The volume that can be processed is greatly increased, and a 210×297 mm printed circuit board can be tested in the horizontal position.

Test area anti-drop mechanism

A braking system fitted to the drive mechanism prevents specimens from falling into the test area when the chamber stops operation.

Other protection mechanisms are equipped to ensure that the specimen does not fall.

Easy wiring access

A cable port is provided on the right side to allow easy wiring of specimens for measurement during high and lowtemperature cycle tests.

Comprehensive safety system

A dual safety system automatically stops the test area drive mechanism if the door is left open, and automatically locks the door when the test area is in motion.

Equipped with casters for mobility

Characteristics

A whole range of environmentally-friendly features

Reduced power consumption

Reduced power consumption is an important issue for our customers. This compact thermal shock chamber employs number of measures such as the use of electronic expansion valve to regulate the refrigeration capacity control. Specifically aimed at energy savings.

Minimum footprint

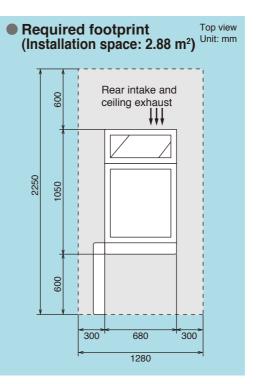

Its slim design requires only $2.88m^2$ installation space (31 ft²). Ideal for narrow spaces in labs or factories.

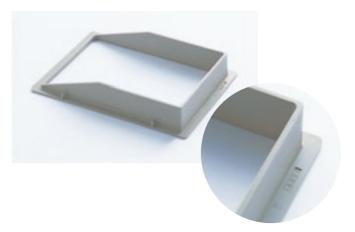

Material labeling for easy recycling

Plastic molded components are labeled and easily detachable to make recycling easier for future disposal of the equipment.

Paperless recorder (option)

Built-in paperless recorders is available to record temperatures from various sources, such as test area temperature. Recording is possible on Compact Flash Card or via USB port.

Paperless recorder (optional)

TEST STANDARD (TSE-11-A compliant)

Test standard		Exposure temperature			Exposure time		Temp.	Number of	Test starting
		High temp.	Ambient temp.*	Low temp.	High/ low temp.	Ambient temp.*	recovery time	cycles	point

*1 The performance values are under the conditions of a +23°C ambient temperature, relative humidity of 65%rh, rated voltage, and no specimen. Heat up time and pull down time are those of single-unit operation of each chamber.

*2 The performance values are based on IEC60068-3-5:2001, JTM K07:2007.

*3 Temperature heat-up/pull-down time account for performance of each temperature chamber.

*4 Excluding protrusions. *5 Compliance with CE Marking. *6 At ambient temperature +23°C.

*7 At 1m from front of chamber, 1.2m from floor. (ISO 1996-1:2003 A-weighted sound pressure level) depending on environment

•Do not use specimens which are explosive or inflammable, or which contain such substances. To do so could be hazardous, as this may lead to fire or explosion.

•Do not place corrosive materials in the chamber. If corrosive substances or humidifying water is used, the life of the unit may be significantly shortened.

•Do not place life forms or substances that exceed allowable heat generation.

Be sure to read the user's manual before operation.

SAFETY DEVICES

- Leakage breaker (200, 220, 380, 400/ 415V AC)
- Circuit breaker (400V AC)
- Electrical compartment door switch
- Hot chamber overheat protection switch
- Cold chamber overheat protection switch
- Hot chamber overheat protector (Controller)
- Cold chamber overheat / overcool protectors (Controller)
- Test area overheat and overcool protectors (Built-in controller)
- Test area overheat / overcool protectors
- Refrigerator high pressure switch
- Thermal relay for compressor
- Temperature switch for compressor
- Temperature switch for air circulator
- Thermal relay for air circulator
- Motor inverter
- Motor reverse prevention relay
- Hot chamber door switch
- Cold chamber door switch
- Test area hold
- Door lock mechanisms
- Fuse
- Specimen power supply control terminal

ACCESSORIES

- Specimen basket (18-8 Cr-Ni stainless steel, 5 mesh metal basket) W320×H35×D230mm Load capacity: 2kg (equally distributed)
 Cartridge fuse (5 A)
 Cable port rubber plug
 Wirefisher
- User's manual (CD-R, booklet)

OPTIONS

Paperless recorder

Records temperature of each section such as the temperature inside the chamber.

Number of inputs:

PL1S: 1 (5 more channels can be turned ON) Data saving cycle: 1 sec

- PL3S: 3 (3 more channels can be turned ON) Data saving cycle: 1 sec
- PL3L: 3 (3 more channels can be turned ON)
- Data saving cycle: 5 sec
- Temperature range: -100° C to $+220^{\circ}$ C External memory:
 - CF memory card port

(Includes a 256MB CF card)

Languag: ENG, JPN can be changed

Temperature recorder (digital display)

Temperature range:

2

- 1

2

--1

--- 1 set

-100 to +220°C Effective recording chart width:

100mm

- RK-61: 1pen
- RK-63: 3 pens
- RK-64: 6 dots

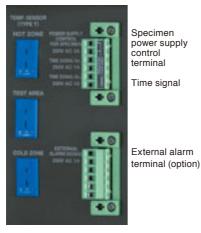

Recorder wiring

Preparation of a power cable, temperature sensor, and conductor grounding wire for additional installation in the future.

OPTIONS

Terminal for recorder

To output temperature values from the test area, hot chamber, cold chamber.

Total cycle counter

Indicates cycle counts. Display range: 1 to 99999999 (with reset function)

Additional overheat protector

Additional preventive measures can be taken for excessive temperature rise in the chamber, in addition to the standard equipped overheat protectors.

External alarm terminal

If the safety device of the chamber is activated, the external alarm terminal will notify it to a remote point.

Emergency stop pushbutton

Stops the chamber immediately.

Cable port rubber plug

Prevents air leakage from the cable port.

Specimen basket

Equivalent to standard accessory. • Material: stainless steel (5 mesh)

Anchoring fixtures

Used to bolt the chamber to the floor.

Power cable

Used to connect to the primary power source.

- 5m
- 10m

Color specification

Chamber can be painted to any desired color. (a color sample is required)

Interface

Computer interface GPIB
 Serial interface RS-232

• Serial interface RS-232C *Select one, instead of standard RS-485.

Communication cable

- RS-485 5m/ 10m/ 30m
- GPIB 2m/4m
- RS-232C 1.5m/ 3m/ 6m

Thermocouple

Attached to specimens to measure specimen temperature.

- 2m
- •4m
- 6m

* T JIS C 1602 with ball attached

Auxiliary cooling injector (LCO₂)

Used to reduce the temperature recovery time of low temperature exposure by injecting liquefied carbon dioxide at the beginning of exposure.

Auxiliary cooling injector (LN₂)

Used to reduce the temperature recovery time of low temperature exposure by injecting liquefied nitrogen at the beginning of exposure.
